 $7.$

Abgeschnitten

$$\tilde{\chi}_{0}^{2} = 0.5873BBB \cdot 42^{5}$$

$$= 5.42^{4} + 8.12^{3} + 7.12^{2} + 3.12^{1} + 11.12^{0} + 11.12^{-1} + 11.12^{-1}$$

$$\approx 418559,9930555.$$

Absoluter Fehler

Gerundet

$$\tilde{\chi}_{0}^{2} = 0.5874000 \cdot 42^{5}$$

$$= 5.42^{4} + 8.12^{3} + 7.12^{2} + 4.12^{1}$$

$$\approx 418560$$

Absoluter Fehler

1.b)
$$f(x) = x^3 - 1.6665 \cdot 1015$$

$$f(x_0) = 118'559.999^3 - 1.6665.10^{15}$$

= 35467846579.555679999

Abgeschnitten

$$f(x_0) = 118'559,9930555 - 1.666.5.70^{-5}$$

= 35217170474, 407451888

Relative Fehler

Gernndet

$$f(\tilde{x}0) = 118560^3 - 1.666.5.70^{15}$$

= 35570016000

Relative Fehler

$$C) \quad K(x) = \frac{13x^{2}(\cdot |x|)}{|x^{3} - 1.6665.10^{15}|}$$

Abgeschnitten

$$\frac{0.0070677001657248}{5,0139.10^{-8}} = 1.4096.10^{5}$$

Ja es war eine realistische Abschätzung. Die Zahlen sind sehr ähnlich. Die Differenz kommt sicher von den Rundungsfehlern der Zwischenresultate.
